

# LEVELER

Design simplicity that's the Thomas 48 inch leveler attachment. Yet this simple tool may become the most versatile attachment on your jobsite.

The Thomas leveler is designed to redistribute material swiftly smoothing out even the most uneven site.

The leveler works equally as well as the loader moves forward as in reverse planning down a 4 ft. (1.2 m) wide path every pass.

When not used for leveling the leveler does double duty as a material carrier ferrying various supplies around the jobsite
