

Power Box Rake

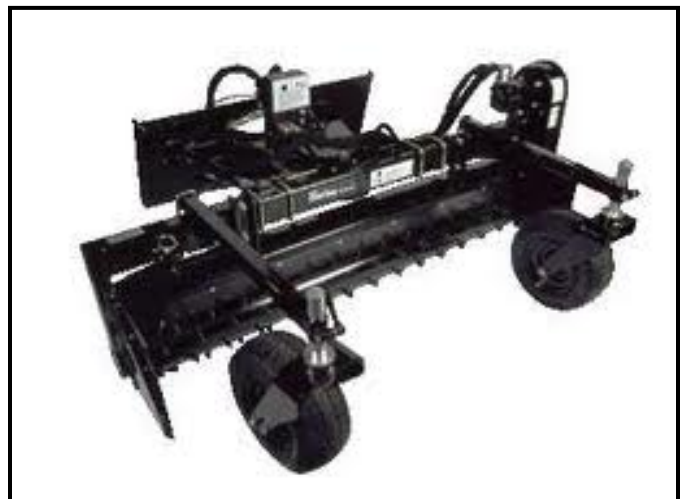

The Thomas Power Box Rake will quickly turn any site into a smooth seed bed ready for seeding or laying sod.

The carbide teeth on its 48" (1219 mm) roller are not only designed for superior wear performance but are specially shaped to ensure the best sub-base fracture pattern and improved moisture retention or release depending on roller positioning.

The fully adjustable roller allows you to determine the size of material you leave in the seed bed. You can also choose between manual or fully hydraulic angle adjustment of up to 20°.

Dual independent gauge wheels allow skim passes for over-seeding or adjusted to cut drainage grades.

In addition the endplates can be quickly removed for windrowing or reverse operation.
